“Vaccine, the Flu, & You”

Getting a flu vaccine every year is very important. Getting a flu vaccine can:

- Keep you from getting sick with the flu.
- Help you and your family members reduce your risk of serious flu illness and flu-related complications, including hospitalization and death.
- Help protect people around you, including those who are more vulnerable to serious flu illness and flu-related complications due to age and/or certain chronic health conditions.
- Protect pregnant individuals and their babies – during and after pregnancy.
